

**Constant-predictor accuracy figure (Adult, DP attack)**  
 $x=\alpha$  ; lines for  $\tau$  + Naive + horiz 0.752

*For  $\alpha \leq 0.2$  DRO ( $\tau=1$ ) stays near/above 0.752;  $\alpha \geq 0.3$  all variants drop below (use  $\tau=1$  for best DP in defensible regime).*
